current 2018 update:

The Economist Jan 4th 2018

The next frontier--Using thought to control machines

**Brain-computer interfaces may change what it means to be human**

Both America's armed forces and Silicon Valley are starting to focus on the brain. Facebook dreams of thought-to-text typing. **Kernel**, a startup, has \$100m to spend on neurotechnology. **Elon Musk** has formed a firm called **Neuralink**; he thinks that, if **humanity** is to survive the advent of artificial intelligence, it **needs an upgrade**.

Many of the first applications hold out unambiguous promise—of movement and senses restored. But as uses move to the augmentation of abilities, whether for **military purposes** or among consumers, a host of concerns will arise. Privacy is an obvious one: the **refuge of an inner voice may disappear**. Security is another: **if a brain can be reached on the internet, it can also be hacked**. Inequality is a third: access to **superhuman cognitive abilities could be beyond all except a self-perpetuating elite**.

\*\*\*\*\* [click here to read all about COCHLEAR IMPLANTS into the skull and brain mass!](#)

The new “silent speech system.” Regina Dugan and DARPA are looking at using optical imaging – using lasers to capture changes in the properties of neurons as they fire – to glean words straight from our brain before we say them. If these signals can be read, they can be transmitted silently to other people. She has assembled a team of 60 people, including machine learning and neural prosthetics experts, to enable such a system. Using the combined skills set of brain-computer interface engineers and neural imaging engineers. Their goal? To create a system capable of telepathically typing one hundred words per minute – five times faster than you can type on a smartphone – straight from your brain to other brains, without the use of a mini smart phone. “It sounds impossible but it’s closer than you may realize.” It is now in black ops research a fact. They will use non-invasive sensors that can measure brain activity hundreds of times per second at high resolution to decode brain signals associated with language in real time. Apart from building a brain-to-computer interface, her team is also working on a way to let people hear through their skin, which will produce a parallel technology that allows wifi mind reception of foreign languages in a language you understand, without the use of any devices, which can at the same time transmit feelings and emotions via device free wifi also.

<https://www.youtube.com/watch?v=aQVHubXoDo>

2017 when **Silent Voice First** was introduced – go to minute 16:15 for new update on **cochlear device** technology and to minute 11:30 for **wireless brain to brain human telepathy** communication systems available in black ops projects.

**Regina Dugan**-->DARPA director-->Google director-->Facebook Building 8 secret project, she has had since last millennium **unlimited access to MIT personnel**.

Dugan first served as a Pentagon **DARPA program manager** from 1996 to 2000. 2000-2008 no data from Wikipedia, however **RedXDefense** was co-founded in 2005 by Regina Dugan with her dad as CEO and her uncle is chief advisor of strategy, who is an identical twin of her father (no info available via FOIA -- <http://foreignpolicy.com/2014/08/13/former-darpa-chief-violated-pentagon-ethics-rules/>); then again, from July 2009 to March 2012, Dugan served as the 19th **Director of DARPA**, leading an active operational deployment in direct support of the war in Afghanistan for which the Agency was awarded the Joint Meritorious Unit Award. She is on the Board of **Varian Medical Systems, Inc.** and on the Board of **Zynga** .

<https://www.timesofisrael.com/facebook-wants-to-read-your-mind/>

Her technology could let people fire off text messages or emails by thinking, instead of needing to interrupt what they are doing to use smartphone touchscreens, for example.

**BOOZ ALLEN HAMILTON (BAH) dark hand in black ops, electronic human telepathy**

(however, often Booz Allen Hamilton is under suspicion of breaking secrecy laws signed between them and the DoD and subjected to external investigations)

<https://www.huffingtonpost.com/project-on-government-oversight/air-force-lifts-booz-alle-1-b-1437605.html>

NOV. 2017 – from Newsweek: In a [Facebook post](#) this week, Regina Dugan said: “Today I am announcing that early next year, I will be leaving Facebook [Silent Voice First project] to focus on building and leading a new endeavor. <http://www.newsweek.com/facebook-brain-computer-interface-chief-quits-building-8-project-mind-reading-689153>

Facebook isn't the only company working on a brain-machine interface, with DARPA revealing plans last year for [a neural connection](#) that will "open the channel between the human brain and modern electronics." Elon Musk is also working on similar technology through his Neuralink [startup](#), which registered as a "medical research" firm in California last July. The so-called neural lace involves implanting electrodes into the brain in order to augment natural intelligence. Eventually, Musk hopes the interface will allow humans to compete with artificial intelligence.

**from QUORA article on Silent Voice First:**

<https://www.forbes.com/sites/quora/2017/04/25/the-revolutionary-voice-first-technology-being-developed-in-facebooks-building-8/amp/>

The concept is simple in that we all say the words we speak in our minds before we speak them. In some situations, perhaps not as many as we imagine, we may find the need to just think the words we want to say to our Voice First Personal Assistants rather than speaking them aloud. Facebook identified this issue and is building the new systems around the old science of hemispheric brain energy scans surfacing the speech centers and through AI and Machine Learning (ML) using this data to extract word intents. develop a brain-computer interface that will, in the future, allow individuals to communicate with other people without speaking. Ultimately, they hope to develop a technology that allows individuals to "speak" using nothing but their thoughts—unconstrained by time or distance.

They want to create category defining products that are Social First of course using Voice First as the primary input system. Products that allow us to form more human connections and, in the end, unite the digital world of the internet with the physical world and the human mind. The brain produces about 1 terabyte per a second, through speech, we can only transmit information to others at about 100 bytes per a second. Facebook wants to get all of that information out of the "brain" and into the world. Typing is not going to be useful in this new world. The average person types between 38 and 40 words per minute. We can speak at 100 words a minute and using our thoughts we can match this speed. That's far, far faster than most humans can type on a computer or device. The goal is to allow people to type five times faster than people can type on a smartphone straight from their brain. This means that they are developing technologies that can "read" the human brain in order to transmit this information.

**Next, they will work to allow people to "telepathically type".**

Building 8 is working on technology that will allow all humans to type and click through our brains in order to interact with computers. This is sort of a brain touch screen metaphor. This tech is a magnitude more complex than decoding Silent Words. They have developed actuators that allow people to "hear" through their skin. Ultimately the technology will allow humans to "feel" words. Eventually you will think something and send the thought to someone's skin. Additionally, this will allow people to think something in one language and have a person receive the thought in an entirely different language.

**University Research and Partnerships.**

The thinking-to-text project is headed up by Mark Chevillet, previously an adjunct professor of neuroscience at Johns Hopkins University. Chevillet said the goal over two years is to build a noninvasive system that harnesses picks up speech signals inside the brain and permit people to silently turn those thoughts into text at a speed of 100 words per minute.

From a blogger: The term C4ISR is a descriptor for Artificial Telepathy -- a powerful fusion of signal processing technologies that allows technicians to remotely gather and collect human intelligence (HUMINT) from the brain signals (SIGINT) of other human beings. As with C4ISR, Artificial Telepathy incorporates "signals collection" (eavesdropping) with "intelligence analysis" (figuring out what people intend to do) by utilizing satellites and computers. One could define Artificial Telepathy as a subset of C4ISR with a special focus on neurology, psychology and mind control. Artificial Telepathy is an exotic form of C4ISR that allows warriors to communicate nonvocally with soldiers in the field, enables spies and intelligence agents to perform reconnaissance and surveillance nonlocally by means of "remote viewing," and allows military officers to command and control the behavior of

human minds at a distance, with the artificial aid of carefully networked satellite and computer technology. Booz Allen Hamilton certainly has close ties to the contractors who worked on the Pentagon's "Stargate" program for psychic spying in the 1990s, and it took a lead role in development of the NSA's "Total Information Awareness" projects, mentioned in earlier posts.

### "Brainwaves to Social Media Platforms" + "Silent Voice First"

Smart phone functions in your brain without speaking you can hear and speak to others and control your internet surfing & viewing internally in your head.

Big Brother will soon easily monitor all your thoughts, urges, views, mental imagery, emotions, memories, and communications to others and between your biological internal systems.

Elon Musk. Despite his many contradictory statements, he is all for it and probably an advanced android himself, still a classified project.

Like spiders, AI software/moveable hardware and global intelligence can "*lay like insect eggs backup programs everywhere*". *Why do you think it was originally called THE WEB?*

**HERE IS YOUR PRIMER..... ----> [President Obama's BRAIN initiative for DARPA](#) at Ft. Campbell & Minneapolis firm MEDTRONIC, 2014-15, and beyond! Read all the links below to find out more about .... The NESD program aims to develop an implantable neural interface able to provide unprecedented signal resolution and data-transfer bandwidth between the brain and the digital world.**

[What are the Ethics of Military Cognitive Psychologists "Restoring" Lost Memories by brain chip implants, a May 2014 study by Daily Mail reporter Victoria Woollaston.](#) "Although the exact science behind the plans won't be announced 'for a few months', a medical ethicist has expressed concerns the technology could interfere with a patient's personality and even their conscience." Eventually, DARPA hopes to develop a wifi device that is portable and wireless and that 'must incorporate implantable probes'.

["anomalous cognition"--Anomalous cognition is a term coined by Science Applications International Corporation \(SAIC\) to refer to ESP, including telepathy, clairvoyance, precognition and remote viewing.](#) SAIC also refers to psychokinesis as anomalous perturbation. SAIC claims their terminology is neutral. It also sounds more scientific and looks better on grant applications. SRI out at Stanford is really into this field too.

[--- old 1999 research collides with new 2017 applications: Why Psi: Perceptions of Anomalous Cognition, by Debbie Plotnick](#)

[July 2015--"The new partnership between Tufts and NSRDEC will allow NSRDEC scientists opportunities to partner with Tufts faculty and students and utilize unique center resources," Mahoney said.](#) "It will also afford the opportunity for Tufts faculty, undergrad and grad students to gain further real-world experience working collaboratively with NSRDEC scientists to solve Soldier problems in specialized NSRDEC facilities, such as the climatic chambers, that are not available to them at the university." The center's research will be divided into four areas. The first area will examine the principles, which govern interactions between people and intelligent supporting systems. "These include hand-held and person-borne devices [smart phones, head-mounted displays and tablets] and autonomous robotic platforms aimed at augmenting and optimizing human cognition, effect, and/or physical capabilities in mixed initiative teams," Mahoney said.

**Kentucky is the most meteor impacted region of the U.S. by meteorites in our continent's entire known geologic history. A huge underground arch and dome connects this cavernous underground complex directly to similar meteor formed structures in Cincinnati, Ohio, and in parts of Pennsylvania.**

## **TRANSCENDENT WARFARE**

[Unconventional Human Intelligence Support: Transcendent and Asymmetric Warfare Implications of Remote Viewing by Commander L. R. Bremseth, United States Navy, 28 April 2001](#)

Abstract Concerned that a psychical (PSI) gap existed between U.S. and Soviet paranormal research efforts, the CIA sponsored discreet research into paranormal phenomena commencing in 1972. Over the succeeding twenty-three years, the U.S. military and intelligence services were actively involved in paranormal research and operations involving a process known as remote viewing. Remote viewing, which produced specialized human intelligence support, served as part of overall military and government organizations' intelligence collection efforts. In 1995, after assuming remote viewing program management responsibilities from the DIA, the CIA decided to terminate the program based on a controversial review conducted by the American Institutes for Research. Yet, remote viewing's demonstrated capacity for providing unique, non-technical intelligence support posited said program as a leading candidate for exploring currently evolving forms of warfare. Presented within is a brief history of the remote viewing program, an examination of its evolution over the course of more than twenty-three years, and a discussion of its continuing relevance to national security and emerging warfare trends.

ARTIFICIAL TELEPATHY: a highly developed SRI & SAIC & DARPA and NRO technology that has been highly developed for over 20 years already, but not released on the commercial marketplace yet. Don't forget your cell phone and internet social networks were being used by military research personnel LONG BEFORE it was ever sold to you!

[MINDSTORM wifi artificial telepathy and telekinesis warfare actually exists, not just in cheap Hollywood B-movies, but let's take a look at such a movie first!](#)

### **Anomalous Cognition: Remote Viewing Research and Theory Paperback – August 7, 2014**

Anomalous cognition involves the acquisition of information emerging from a distant point in spacetime that is blocked from the usual sensory systems by distance, shielding or time. From 1975 to 1995, Edwin May was a scientist and then program director for the U.S. government's psychic espionage program, known as STAR GATE. With the closing of that program, research has continued at the Laboratories for Fundamental Research, in Palo Alto, in the areas of methodology and analysis, neurophysiological studies, personnel assessment and selection, operations research, the physics of anomalous cognition, and psychokinesis.

The conclusions from this 35+ year research effort can be summarized as (1) ESP exists; (2) the gradient of Shannon entropy is the key factor influencing information transfer; (3) because of the innate nature of the ability, the phenomenon so far resists training for excellence (and replication studies will not yield results), and (4) evidence for psychokinesis (PK) is questionable. This book presents the state-of-the-art, with 26 key papers on research methods, physiological research, decision augmentation theory, entropy, other research, and research challenges.

"I voted Democrat all my life and look where it finally got me!

My Obamacare couldn't help me or my sons who came back from Afghanistan and northern Iraq with parts of their minds and limbs missing.

NO JOBS NO AID NO NATIONAL HEALTH CARE

When PEOPLE magazine ran endless stories and cover issues in 2008 on Michelle Obama's incredible French and Italian wardrobe, I thought the nation was in for a respite from GW.

Ha ha ha ..... I can't laugh or the bartender won't spot me a free shot cause he feels sorry for me.

**MADE

## **OLDER related NEWS regarding Manchurian Candidates, psychotronic shooters, robotic serial shooters, & "inner voices" shooters in USA**

[July 31, 2002, 4 Wives Slain By Their Husbands In 6 Weeks At Fort Bragg](#)

[Man wanted for killing wife, a Fort Bragg soldier, on base, JULY 15, 2016](#)

Friends of the three Fort Bragg soldiers suspected of killing their wives this summer say the men exhibited unusual anger and incoherence after returning from Afghanistan where they were given an anti-malaria drug associated with aggression and mental problems. One of the soldiers was "almost incoherent" and visibly shaking while describing marital problems to a neighbor. Another became unable to control his anger at his wife in public, startling those who knew him. A third puzzled his new neighbors with his strange behavior. Soldiers at Fort Bragg said they are well aware of mental problems linked to the anti-malaria drug Lariam, made by Hoffmann-La Roche and approved by the Food and Drug Administration, which include aggression, depression, paranoia, hallucinations and suicidal thinking, even as official military spokesmen dismiss a connection between the drug and the events around Fayetteville this summer which have drawn national attention.

UPI reported that mounting evidence suggests Lariam has caused such severe mental problems that in a small percentage of cases it has led to suicide. In July, UPI reported that scores of Peace Corps volunteers are coming forward saying they have suffered severe mental problems, some of which have lasted for years after they stopped taking the drug.

In early February 2005, 18,000 angry and/or disgruntled American soldiers, many of them badly betrayed Reservists, who had been fighting in Iraq, were then rotated through the Fort Campbell Air Base and camp in **Kentucky**, not knowing what their next orders would be or for how much longer they would not be able to support their families under state and federal budget cuts, giant tax breaks for the super rich, and outsourcing of jobs and factories to countries which send us the most immigrants to live in USA.

-- 3 deranged **psychotronic shooters** in US daily lives in the last decade, can you remember the details? They march to a different drummer, inside their heads, guiding them onwards and speaking to their most private consciousness.

[---ANOMALOUS COGNITION--- Bryn Mawr University researches into ANOMALOUS COGNITION --- click here](#)

From this week's THE ECONOMIST

Feb. 15, 2004

"A different sort of army"

[FORT CAMPBELL, KENTUCKY](#) -- Around one in five of the troops in Iraq are reservists or part of the National Guard—and that proportion will double after the current **rotation**. These part-time soldiers are typically older, more likely to be married and have children than regular, active-duty soldiers; and **most of them have jobs**. They will return to civilian life, making them less easy to monitor than active-duty troops returning to bases.

There are also financial worries. Hard to account for is the cost of leaving a family business unattended or missing a key promotion. On February 11th, several state lieutenant-governors launched a programme of grants for **financially strapped families of reservists and National Guard soldiers**.

The Army Reserve and National Guard have both fallen short of their most recent recruiting targets. Fear of an exodus of Army Reserve and National Guard soldiers prompted the reservists' boss, Lieutenant-General James Helmly to criticise the army's treatment of his men and women. The Reserve, he said, needed to convince its troops that "we value your service and we're not going to run this like a doggone **flesh farm**." That would mean giving reservists more predictability in their lives—a tall order in an age of global terror.

The assistant secretary of defence, Thomas Hall, who oversees the reservist and National Guard operations for all military services, rejects suggestions that his forces are stretched thin.

About 350,000 of them (**38% of the "drilling reserve"**) have been mobilised for federal duty since September 2001, leaving most of them available for more routine work like disaster relief. But Mr Hall admits plans are afoot to "rebalance" the mix of skills in his forces, the plan being to lessen the pressure on particular sorts of troops—military police, air-traffic controllers and also, sadly, morticians—that are called up most.

The idea that reservists can be sent overseas has come as a surprise to many families. "My son provided security for the torch at the Olympic Games: that's what I thought the National Guard did," says Rosemarie Slavenas, an Illinois woman whose son was among 15 soldiers killed when a missile hit the helicopter he was piloting in Iraq last November.

Paul Vogel, whose son's tour of duty with the Army Reserve has been extended to a year, took the unusual step of travelling to Iraq to see his son last October.

"The full-time guys don't let their guard down, **but the reservists feel they've been sold a bill of goods on the whole deal**," he says. He and his wife have put an American flag in their snow-covered yard for every American killed in Iraq. The banner on the side of their Victorian mansion in a prosperous, Republican-dominated suburb of Chicago reads: "Proud of Our Soldier, **Ashamed of Our President**".

## **U.S. Iraq/Afghan Troop rotation**

### **Fearing Fort Bragg**

Feb 12th 2004

From **The Economist print edition**

**The men, women and problems now coming home from Iraq via Fort Campbell Kentucky -- 18,000 troops rotated in coming days [pp.30-31]**

[http://www.economist.com/world/na/displayStory.cfm?story\\_id=2429004](http://www.economist.com/world/na/displayStory.cfm?story_id=2429004)

WITHIN certain military circles, "Fort Bragg" is a code word for what the stress of combat can do to a man. In 2002, the **murders of four military wives by their soldier husbands within six weeks at the base** in North Carolina prompted the army to take a hard look at how combat affects troops and their families: three of the Fort Bragg soldiers had returned from special-forces duty in Afghanistan. Two of the men committed suicide **after killing their wives**. [\[see related articles on "remote viewing" technology and microwave brain reading in the military\]](#)

With 123,000 troops returning from Iraq through Fort Campbell, Kentucky, in the next few months (to be replaced by 110,000 soldiers and Marines), and another 11,000 being "turned" over in Afghanistan, America is in its largest troop rotation since the second world war. General Richard Myers, chairman of the Joint Chiefs of Staff, has called the operation "a logistics feat that will rival any in history"; it may also have a sizeable social effect.

A virtual battalion of chaplains, social workers, psychologists, psychiatrists, domestic and child-abuse counsellors, financial advisers and others are on tap to embrace the combat-weary human wave about to hit America's shores. There are websites, pamphlets, hotlines and support groups. Over 400 "family readiness centres" are open. At Fort Campbell, Kentucky, where more than 18,000 soldiers are due home in coming months, reunion seminars are being run for spouses.

### **NSRDEC scientists to solve Soldier problems in specialized NSRDEC facilities, such as the climatic chambers**

[July 2015--"The new partnership between Tufts and NSRDEC will allow NSRDEC scientists opportunities to partner with Tufts faculty and students and utilize unique center resources," Mahoney said. "It will also afford the opportunity for Tufts faculty, undergrad and grad students to gain further real-world experience working collaboratively with NSRDEC scientists to solve Soldier problems in specialized NSRDEC facilities, such as the climatic chambers, that are not available to them at the university." The center's research will be divided into four areas. The first area will examine the principles, which govern interactions between people and intelligent supporting systems. "These include hand-held and person-borne devices \[smart phones, head-mounted displays and tablets\] and autonomous robotic platforms aimed at augmenting and optimizing human cognition, effect, and/or physical capabilities in mixed initiative teams," Mahoney said.](#)

### **Back in 2004.... a case study in psychotronic shooting?**

**Feb. 13, 2004--LEXINGTON, Ky.** — Within minutes of being shot in the head Friday, paramedic Jim Sandford says, he managed to crawl to safety behind a tree, only to watch helplessly as fire Lt. Brenda Cowan lay dying nearby from two shots in a rural section of southern Fayette County.

"I was talking to her, asking if she was OK. We were both pinned down. It just as scary as you would expect," Sandford recalled yesterday in a telephone interview from his home. "She told me she had been hit twice."

"I was trying to get over to her," said Sandford, 40. "But the assailant had us all pinned down."

The suspected gunman, Patrick Hutchinson, 45, has been charged with two counts of murder, one count of attempted murder and first-degree assault. He is accused of fatally shooting his wife, Fontaine Hutchinson, 60, and then Cowan, 40, who became Lexington's first African-American female firefighter 12 years ago.

The suspect kept police at bay for 6½ hours Friday before negotiators persuaded him to surrender. Since the shooting, police and firefighters have said they will review how the firefighter-paramedic crew came to arrive at the scene before police. Friday's shootings have shaken the neighborhood, city and especially the fraternity of firefighters, for whom such dangers are rare.

"There was obviously something that made them feel safe to go in, whether it was a false sense of security or what, I don't know. We just don't have all the facts yet," said Fire Chief Robert Hendricks.

One of the Hutchinsons' next-door neighbors said yesterday she had spoken with Patrick Hutchinson about 10 minutes before the shooting, and he was raving about "clones."

Anna Foy, 71, a retired reading instructor at Athens Elementary School, said she was returning home from visiting her mother when she saw Patrick Hutchinson standing along the side of the road.

"He was looking at the ground, but he sort of waved toward me," she said, so she rolled down her car window to say hello. "He starts in on this tirade," Foy said. "And the first thing he said — and I guess I should be flattered — he said, 'You are one of the humans.' And then he started telling me that everybody else was clones. He said, 'Fontaine's been a clone since the first year we were married.'"

As she ended the conversation, Hutchinson told her, "If you have a gun you better go get it ready because there is going to be a war," she recalled. Foy said she went home to tell her husband about Hutchinson. "I'll admit that I thought maybe I should call somebody about this. But my rationale for not calling, which was false, obviously, was what am I going to tell anybody? They don't arrest people for talking crazy. If they did all the jails would be pretty full."

William Foy said, "It wasn't 10 minutes before we heard the shots."

Sandford, Cowan and firefighter Michael Souder had arrived at the house on Adams Lane about 3:45 p.m. to respond to a call about a woman who had been shot.

Souder was in the truck as Cowan and Sandford rushed to where the woman was lying in front of the house.

Then Sandford heard a shot and felt the pain.

"I was dazed. It took me a minute to understand what was happening ... but I never lost consciousness," the 11-year veteran of the fire department said. "It was chaos."

He had been struck in the head but at such an angle that it made entrance and exit wounds but did not pierce his skull.

"The doctor told me I was hit at an oblique angle," Sandford said. "Because of that I was saved. I was really, really lucky, fortunate and blessed. The doctor told me it was a miracle."

Sandford said he fell to the ground after being shot, bleeding from the back of the head and uncertain how badly he was wounded.

Once he was able to compose himself within a minute or so, he said he was able to talk briefly to Cowan, who by this time had also been shot.

Sandford said his thoughts and prayers were for Cowan and her family. "I know she was a devout Christian," he said. "She was a wonderful person with an outgoing personality that just radiated kindness and love."

As police and more firefighters arrived, Lexington police Officer Thomas Richards parked his cruiser between the home and Sandford and Cowan. He urged Sandford to crawl for cover behind a nearby tree.

From behind the tree, Sandford could see Cowan and talk with her, but he said could not reach her without potentially exposing himself to more gunfire.

"I went into survival mode. I tried my best to use my hands to apply pressure to my wound," he said.

Sandford said he was probably behind the tree for 15 to 20 minutes before he managed to crawl behind a pickup and join other emergency responders who had taken cover there.

"They were finally able to apply better pressure to my wound and slow down the bleeding," he said. With help, Sandford said, he was able to scramble to a "safe perimeter" police had by then placed around the scene.

Sandford estimated that it was perhaps 40 minutes between the time he was shot and when he got to this point, where he finally felt safe from gunfire.

Sandford said he wants to thank courageous "comrades" in the Lexington fire and police departments who he said helped save his life.

**Patrick Hutchinson** of Lexington, Ky., is shown in this **undated** Fayette County, Ky. detention center photo [see photo at top of website]. Hutchinson, **45**, a suspected gunman who told a reporter he was battling "alien clones" that are part of a CIA conspiracy during a 6 1/2 hour standoff at his home was charged Saturday, Feb. 14, 2004, in the deaths of a female firefighter and another woman, **his 60 year old wife**. Hutchinson surrendered Friday night, hours after fire and police crews converged on his house in southeast Lexington following a report that a woman had been shot. "**Patrick Hutchinson**, [45], starts in on this tirade," Foy said.

*"And the first thing he said — and I guess I should be flattered — he said, **'You are one of the humans.'** And then he started telling me that **everybody else was clones**. He said, 'Fontaine's [60] been a clone since the first year we were married.'"*

*As she ended the conversation, Hutchinson told her, "If you have a gun you better go get it ready because there is going to be a war," she recalled.*

According to the **Lexington Herald-Leader**, its reporters were trying to call neighbors of the home. Thinking the shooting happened at a different home, a reporter accidentally called Hutchinson. "We're going against the evil alien clones," the Herald-Leader reported Hutchinson as saying. "I started with my wife."

The newspaper placed the call about 4:30 p.m. EST, about an hour after the standoff began. Once the reporter realized she had the suspect on the line, she kept him talking while an editor called police.

The conversation continued while the editor was put on hold. When an officer returned to the line and asked the Herald-Leader to end the call with Hutchinson, the reporter did.

Soon after, the reporter relayed the contents of the interview to police. Asked to start at the beginning, Hutchinson told the paper,

*"At the end of World War II, a UFO crash-landed near the Russian border." Aliens "possess the upper echelons of our administration. There's only 735 true humans left in Lexington, less than 3 million left worldwide," he said.*

He denied that he had mental problems:

**"You think 'this guy's a nut' ?... well, I'm not a nut."**
